MAINTENANCE AND CARE

In order to keep its appearance and extend the life of the unit, dVault® mailboxes require minimal maintenance. Be sure to follow manufacturer's assembly instructions for your specific product to ensure proper use and warranty coverage. Amount and frequency of maintenance varies greatly depending on the type of weather conditions the unit is exposed to. When the unit begins to appear weathered or dirty, basic cleaning may be required. Rinse the surface with clean water to remove debris on the unit. Use mild soap and water to clean buildup and excess debris from the unit. Do NOT use abrasive scrubbing pads to clean the unit. The use of abrasive pads could cause permament damage to the powder coat finish. Your mailbox is protected with a rust-resistant powder coat paint. In order to retain the finish of your unit, periodically clean your unit as described above, and coat your unit with a high quality automotive wax.
